EDUCATION

University of Washington - Paul G. Allen School of CSE

Graduation: Jun. 2027

B.S. in Computer Science

GPA: 3.73

Relevant Coursework: Linear Algebra, Foundations of Computing I & II, The Hardware/Software Interface, Operating Systems, Data Structures & Parallelism, Software Design & Implementation

TECHNICAL SKILLS

Languages: Java, Python, Kotlin, SQL (MySQL), C/C++ JavaScript, Typescript, Ruby, Go, HTML/CSS, R

Frameworks: React, Node.js, Flask, JUnit, Docker, Kubernetes, Angular, Spring Boot, REST APIs

Tools: Git, AWS Lambda, GCP, Azure, Claude Code, Terraform, GitLab, Google Cloud Platform, Kafka, VS Code

Libraries: scikit-learn, pandas, NumPy, TensorFlow, Matplotlib, nfl_data_py

Skills: Object-Oriented Design (OOP), Unit Testing, Machine Learning, Full Stack Development, Problem-Solving

EXPERIENCE

IT/Software Engineering Intern

Jun. 2025 – Sep. 2025

Plymouth Inc.

Auburn, WA

- Improved productivity for over 300 employees by troubleshooting both hardware and software issues, solving 95% of technical requests in a Help Desk role.
- Generated **Power BI** pricing reports using **SSRS** and building **MySQL** queries.
- Managed a database of **50,000+** items on **Microsoft Dynamics GP ERP**.
- Understood and improved crucial **information security** and was able to communicate technical needs to 200+ new and current employees during an acquisition.

Software & Optimization Team

Sep. 2025 – Present

UW Golf Engineering

Seattle, WA

- Collaborated with Sportsbox AI to ship real-time putting analysis software, delivering automated stroke classification enabling faster and more consistent coaching feedback.
- Designed and deployed **Kotlin**-based application logic in an **Agile**-based sprint.
- Helped design **scalable application and UI components** that translate complex motion insights into clear, actionable feedback.
- Developing an **AI chatbot assistant** for the website, assisting in recruitment and collaboration with sponsors.

PROJECTS

Gridirony | *Python, R*

Aug. 2025 – Present

- Analyzed over 5000 games in a historical NFL dataset to determine probabilities for games and statlines using logistic regression in **R**.
- Sourced and processed data from repositories and public websites using **BeautifulSoup**.
- Built and evaluated multiple models using p-values and AIC, including backward stepwise selection to identify key variables.

Beta Omega Transcripts | *Python, FastAPI, SQL (PostgreSQL), pdfplumber, Regex*

Jan. 2025

- Engineered a **FastAPI** server to manage the end-to-end processing and storage of academic transcripts.
- Architected a normalized **PostgreSQL** database to organize student records across quarters with detailed, course-level data.
- Built secure API routes to handle transcript uploads and enable fast, on-demand access to student information.

DubHacks '24 Hackathon - Vocalytics | *AWS, REST APIs, Python, Node.js, Generative AI*

Oct. 2024

- Developed a generative AI-powered voice transcription app, *Vocalytics* at UW DubHacks.
- Worked on a backend using **AWS Lambda**, **Python**, and **REST APIs** to process, transcribe, and enhance input from the client-side frontend.
- Documented code comprehensively for both front and backend.
